Brand Guidelines

IDB Group

About

Our brand is best expressed through our identity. More than just a logo, this document explains how all our visual elements come together to create the IDB Group's visual expression.

Our identity is the public face of our organization, showcasing what our audiences can expect from us and visually representing everything we stand for.

The following pages are designed to guide you in creating consistent and purposeful communication materials for the IDB Group.

LAYOUT SYSTEM

Logo

Consistent and correct use of the logo builds recognition. The proportions, spacing, and color has been carefully designed to ensure balance and clarity. When applied correctly, the logo unifies all brand expressions and strengthens the overall visual system.

Co-Branding

Using the Entities Logos

Using the Logo with Initiatives

Don’ts

The logo system consists of three variations, primary lockup, secondary lockup and standalone symbol, which should be used accordingly.

PRIMARY

To be used as the IDB Group main identifier

SECONDARY

To be used exclusively for restricted reproduction areas or small spaces

SYMBOL

To be used on clearly defined IDB Group context or in combination with the primary logo

Primary lockup is the IDB Group's primary visual identifier and should be used whenever possible to sign-off all our communications.

Logo
Primary Lockup
Colorways

Use exclusively the approved color combinations shown in this page when reproducing the logo. These color pairings preserve recognition and ensure contrast.

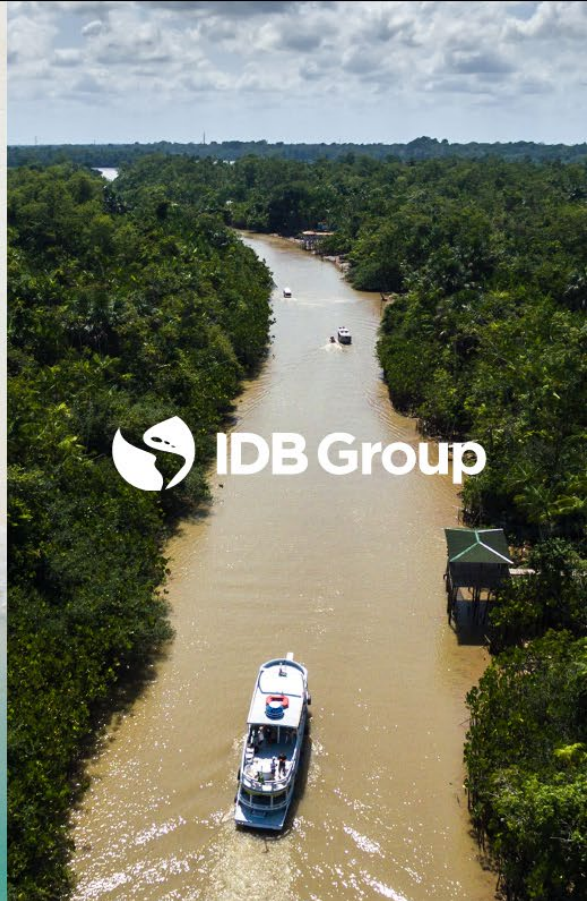

Logo
Primary Lockup
On Imagery

The logo should always remain clear and legible when placed over photography.

Use the black version on light backgrounds and the white version on darker to ensure visibility and contrast.

Pay special attention when using over people, making sure that the logo is not covering the eyes or the mouth.

Logo
Primary Lockup
Clear Space

The logo should always be surrounded by a clear space area which should remain free from other graphic elements.

This space is equivalent to the logo's height.

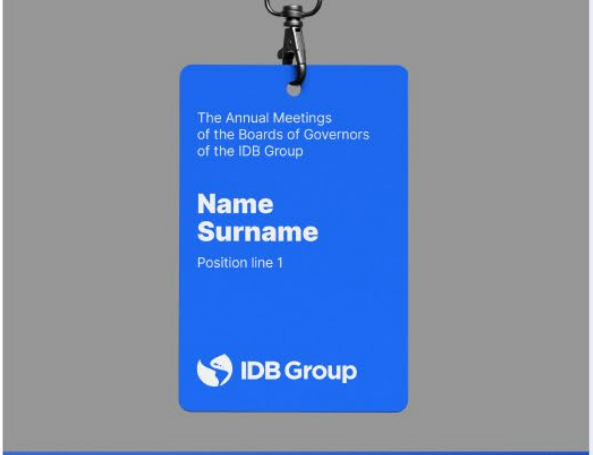

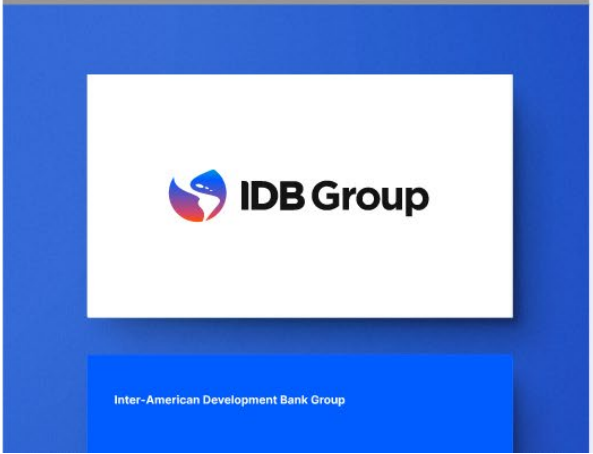

Logo
Primary Lockup
Minimum Size

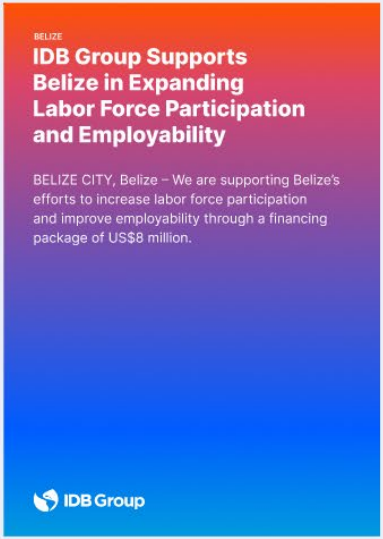

Reproducing the logo above the minimum size will ensure it remains prominent and legible.

Here are some examples
of the primary lockup in use.

The secondary lockup offers an alternative composition of the logo for specific formats or spatial needs.

This configuration is ideal for extreme vertical formats.

Note that the primary lockup should be used whenever the format allows.

Logo
Secondary Lockup
Colorways

Use exclusively the approved color combinations shown in this page when reproducing the logo. These color pairings preserve recognition and ensure contrast.

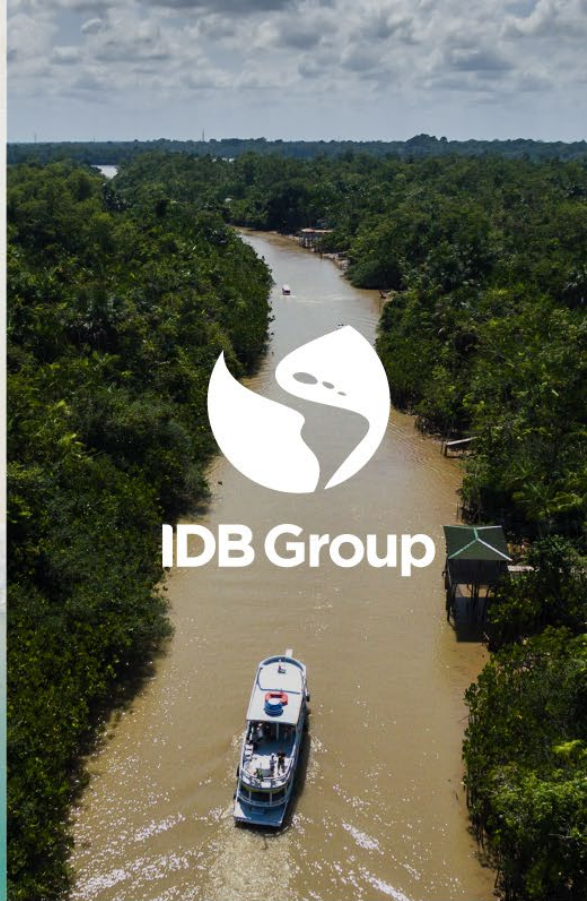

Logo
Secondary Lockup
On Imagery

The logo should always remain clear and legible when placed over photography.

Use the black version on light backgrounds and the white version on darker to ensure visibility and contrast.

Pay special attention when using over people, making sure that the logo is not covering the eyes or the mouth.

Logo
Secondary Lockup
Clear Space

The logo should always be surrounded by a clear space area which should remain free from other graphic elements.

In the secondary lockup, this space equals half the height of the symbol.

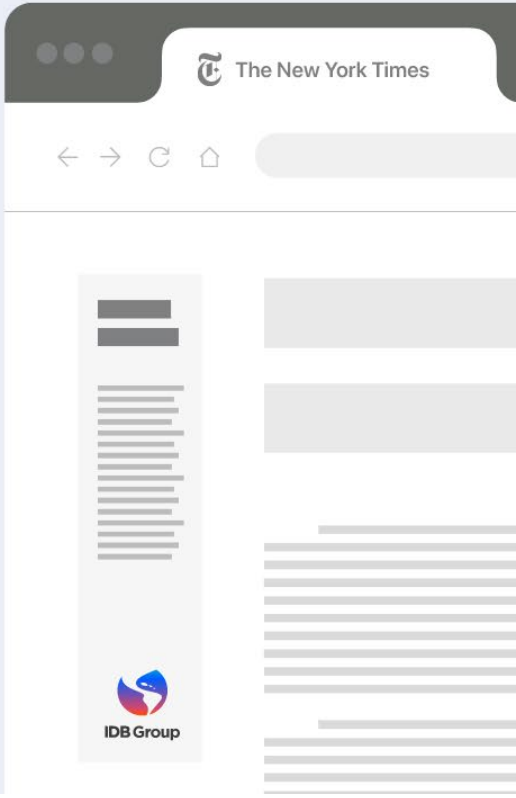

Logo
Secondary Lockup
Minimum Size

Reproducing the logo above the minimum size will ensure it remains prominent and legible.

Here are some examples
of the secondary lockup in use.

Logo
Symbol

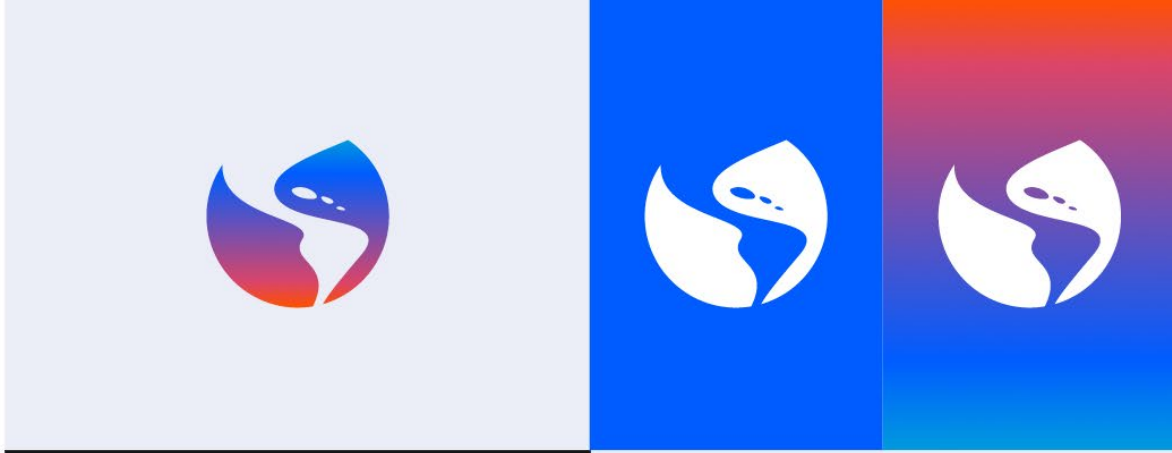

The IDB Group symbol is the most iconic element of the visual identity, representing the synergy among the Group's corporate brands: IDB, IDB Invest, and IDB Lab.

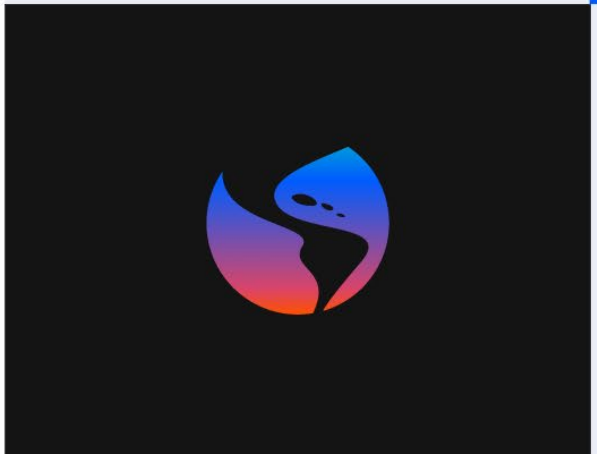

It can be used as standalone in applications where brand recognition is already established or when a more minimal expression of the identity is required.

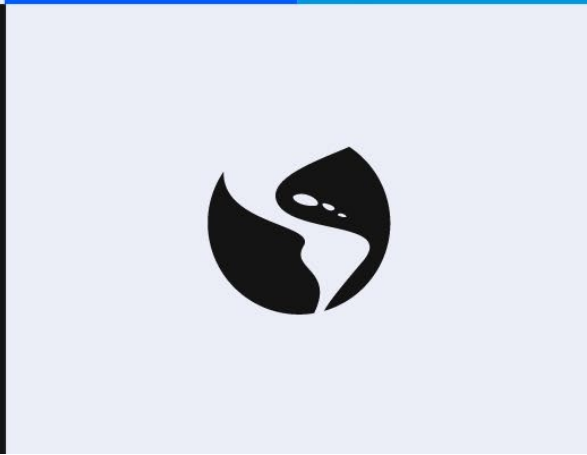

Logo
Symbol
Colorways

Use exclusively the approved color combinations shown in this page when reproducing the symbol. These color pairings preserve recognition and ensure contrast.

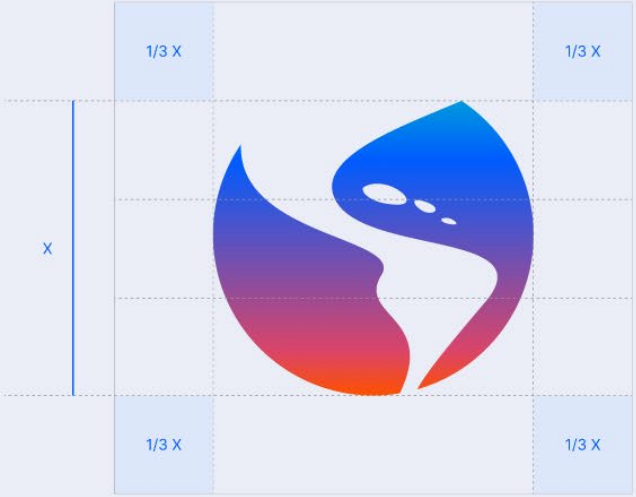

Logo
Symbol
Clear Space

The symbol should always be surrounded by a clear space area which should remain free from other graphic elements.

This space equals one-third of the height of the symbol.

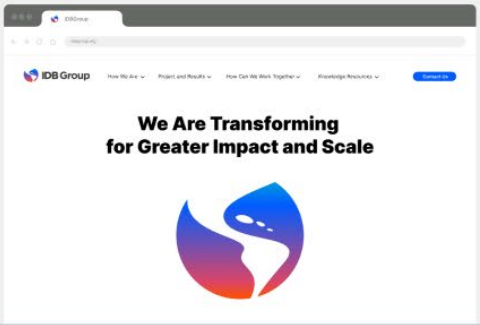

Logo
Symbol
Minimum Size

Reproducing the symbol above the minimum size will ensure it remains prominent and legible.

Here are some examples
of the standalone symbol in use.

These are the rules for the logo priority in co-branding.

IDB Group owned communications. The IDB Group logo should be the first on the left, as the natural reading order of the Latin alphabet is left to right.

Third-party communications. IDB Group as sponsor/partner follow the host's priority protocol.

If no protocol exists aim for parity and, where appropriate, request first position for the IDB Group logo.

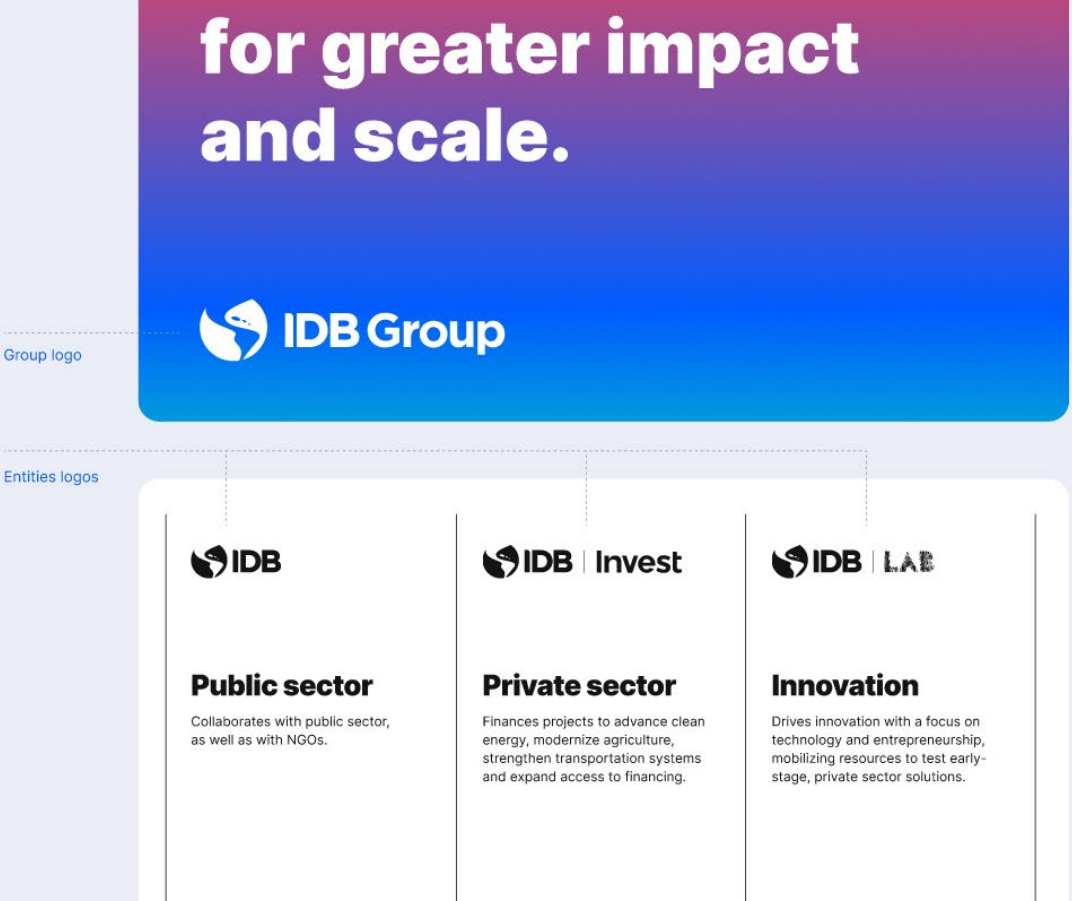

Logo Alignment
Logos can also be center-aligned within a white strip at the bottom of the design.

When there is a need for the entities' logos to appear in the Group's communications context (e.g. the Group referring to its portfolio of entities), those should be applied exclusively in their monochrome version as shown in the example.

Under no circumstances entities' logos should be used to sign-off a Group communication, replacing the IDB Group logo.

Logo
Combining the Entities Logos with IDB Group logo

In select situations, such as a business cards, hints of the individual entities' colors may be applied with the monochrome logo.

Approval of the use of these non-IDB Group colors must be secured through the IDB Group Brand Council.

IDB Group initiatives should be identified using a text-based name treatment rather than a standalone logo. The initiative name should be displayed in typography only and must not be developed, stylized, or used as a logo.

The primary visual identifier for all IDB Group initiatives is the IDB Group blue. Additional graphic elements, imagery, patterns, or design devices may be incorporated into the key visual to create distinction and enhance recognition, provided they remain aligned with the IDB Group visual identity.

The initiative name should always appear as text and never function as an independent visual identity separate from the IDB Group brand.

BID for the Americas

IDB Cares

Ready and Resilient Americas

Alliance for Security, Justice and Development

IDB Pay

LAC Crece

IDB LAC Minerals

Amazonia Forever

América en el Centro

ONE Caribbean

South Connection

IDB Group events follow the same branding principles as IDB Group initiatives. Event names should be presented as text only and must not be developed, stylized, or used as standalone logos.

The primary visual identifier for all IDB Group events is the IDB Group blue. Event key visuals may incorporate additional graphic elements, photography, illustrations, patterns, or other design devices to create differentiation and enhance the visual experience, while remaining aligned with the IDB Group visual identity.

The purpose is to promote recognition of the IDB Group brand rather than creating separate brands for individual events.

Logo
Don'ts

The examples on this page show some typical cases of misuse of the logo.

Do not:

1. Use the black version logo on dark images.
2. Applied the gradient to the wordmark.
3. Use effects, such as shadows.
4. Distort the logo.
5. Use the white version logo on bright backgrounds.
6. Reproduce the logo with other typeface.

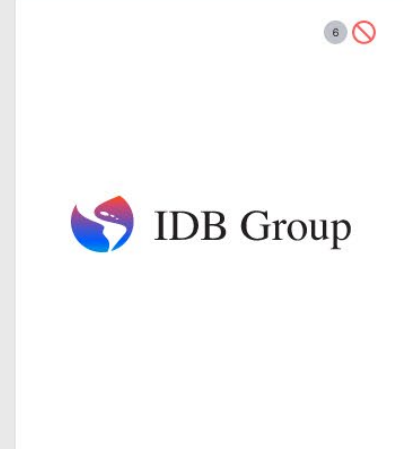

Color

Color is a fundamental element of the visual system. It defines the tone of communication and creates recognition across all brand expressions.
Beyond aesthetics, color establishes emotional resonance, and guides perception.

PMS 447C

WHITE

HEX #FFFFFF
RGB 255 255 255
CMYK 0 0 0 0

The IDB Group gradient is one of the brand's most expressive elements of recognition. It captures the energy and optimism of the brand while expressing what we stand for.

It symbolizes the synergy among the Group's corporate brands: IDB, IDB Invest, and IDB Lab.

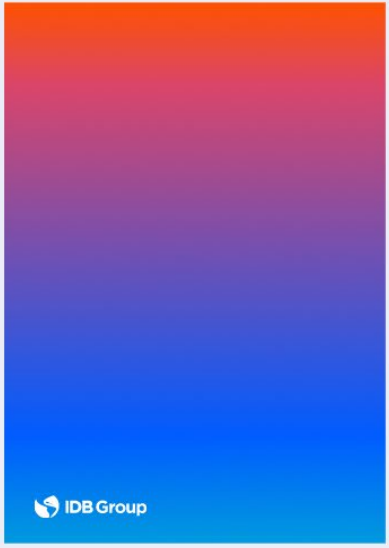

The IDB Group gradient should appear only in backgrounds and within the symbol.

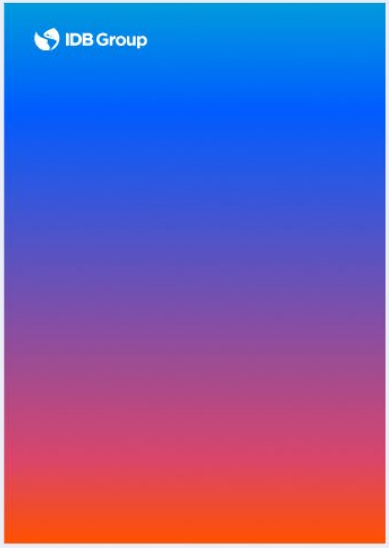

Do not attempt to recreate it manually. Always use the official artwork provided.

Access SVG Gradient

The IDB Group gradient's orientation is defined by the placement of the logo. The blue area should always appear directly beneath the logo.

When an application does not include the logo, the gradient must be positioned with the blue section at the bottom.

The following examples show how the gradient can enhance compositions.

RGB 255 255 255
CMYK 0 0 0 0

Color
Primary Palette
Black and White

The following examples show how black and white colors can be used.

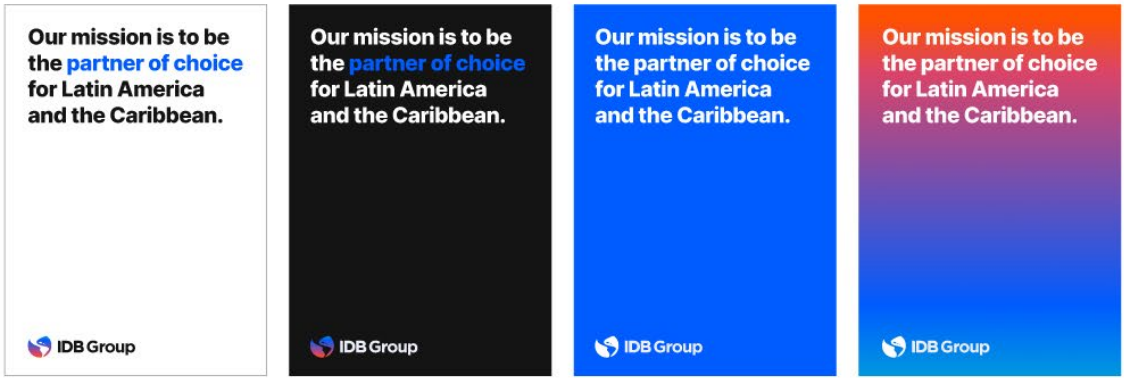

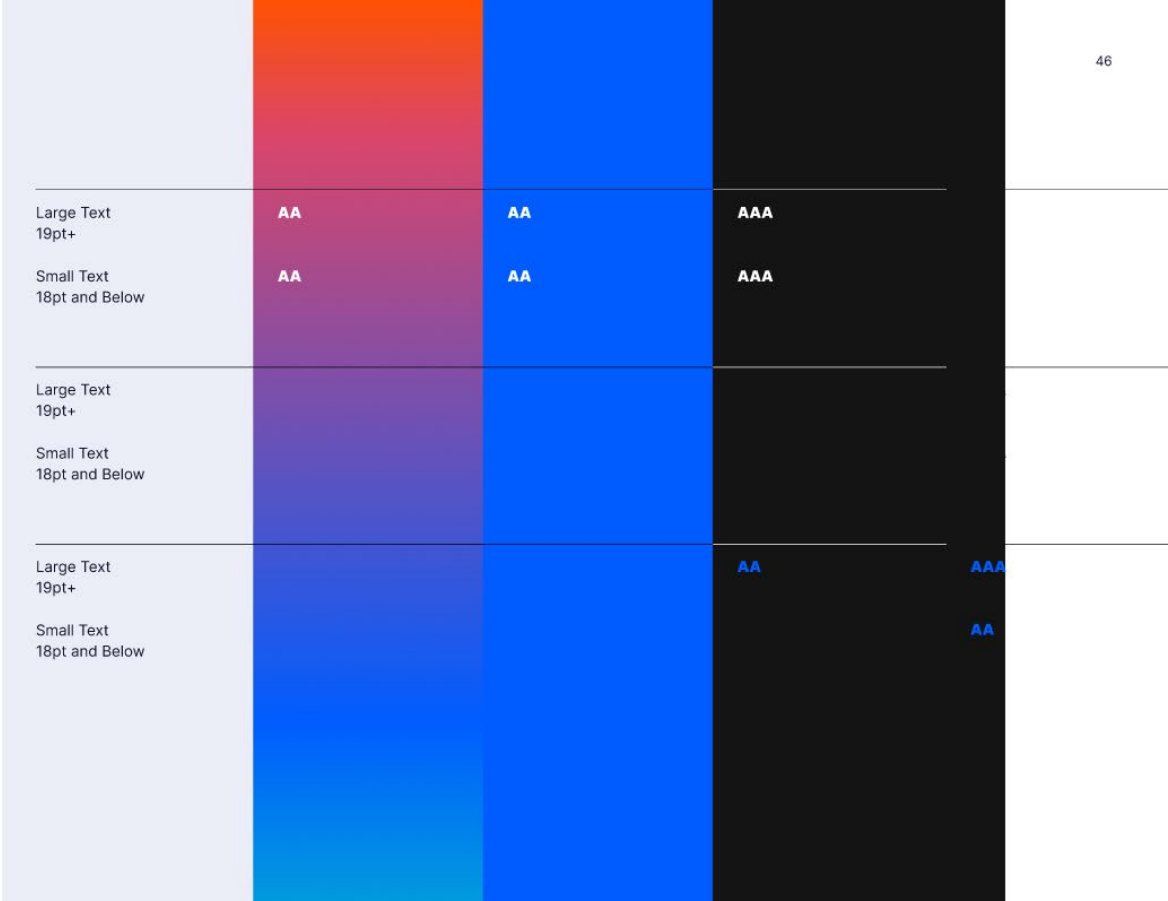

The range of use offers different levels of energy, emotion and presence.

Selecting the right level of expression depends on the context and purpose of the communication.

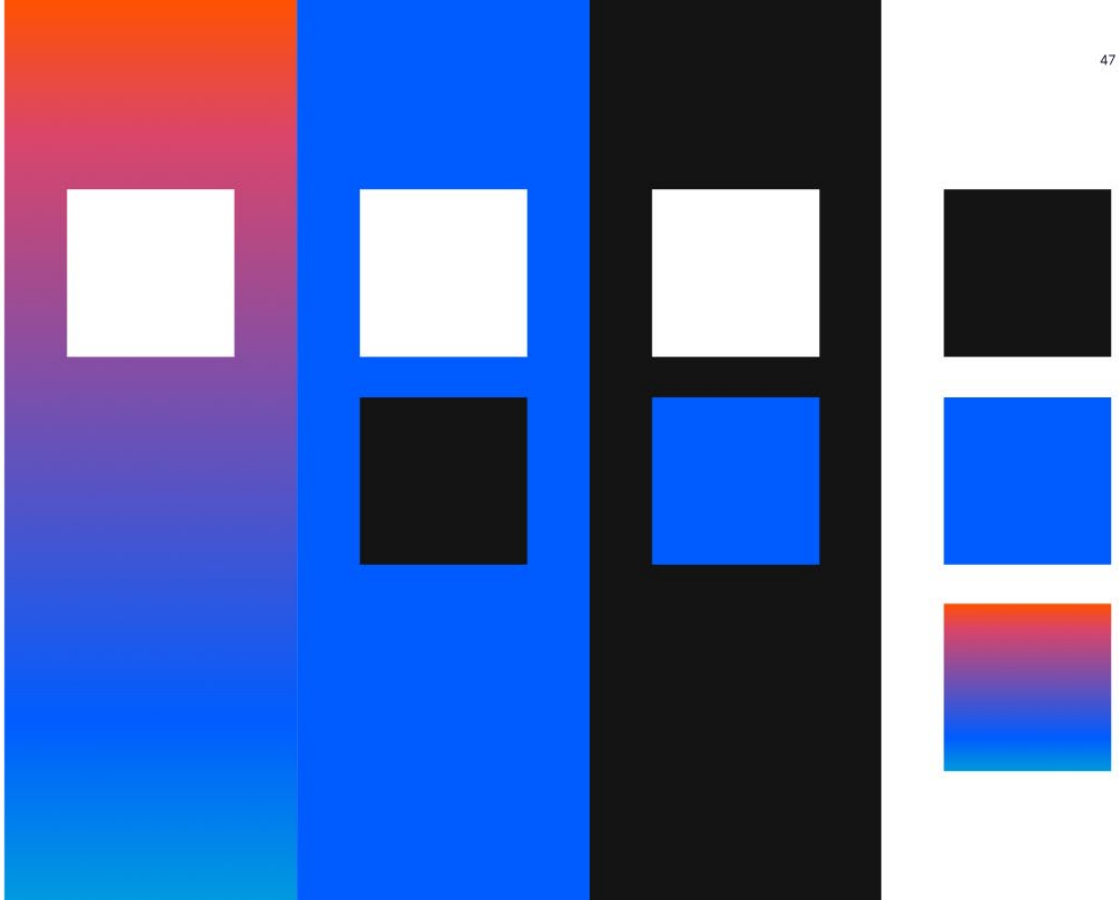

White and black offer maximum contrast and achieve AAA ratings on all backgrounds. AAA ratings refer to the highest level of compliance under the Web Content Accessibility Guidelines (WCAG).

Please follow this accessibility guidance when using typeface to ensure the text is clearly legible to all audience types.

These are the approved and safe color combinations for graphics. They have been tested to ensure legibility, balance and visual consistency across all applications.

The secondary palette extends the brand's range with additional blues and neutral grays, increasing flexibility while staying in harmony with the primary colors.

Color
Secondary Palette

Secondary colors support, never lead: they add tonal steps for UI, data and surfaces.

In select situations, such as business cards, an entity's color can be used as an accent when referring to that entity.

Use of the entities' colors as part of IDB Group branded material (presentations, booths, webpages, etc) must be approved by the IDB Group Brand Council.

Color
Don'ts

The examples on this page show some typical cases of misuse of the color palette.

Do not:

1. Combine the gradient with black or other dark backgrounds.
2. Apply the gradient inside text.
3. Use the gradient as a background for data visualisation or infographics.
4. Use semantic colors as backgrounds.
5. Rotate the gradient horizontally.

The type stack defines the visual hierarchy. This image shows the weights allowed for supporting headings, headings, subheadings, copy, captions and CTA's.

The recommended leading for supporting headings and headings is 120% of the type size.

For subheadings and copy, 140% of the type size.

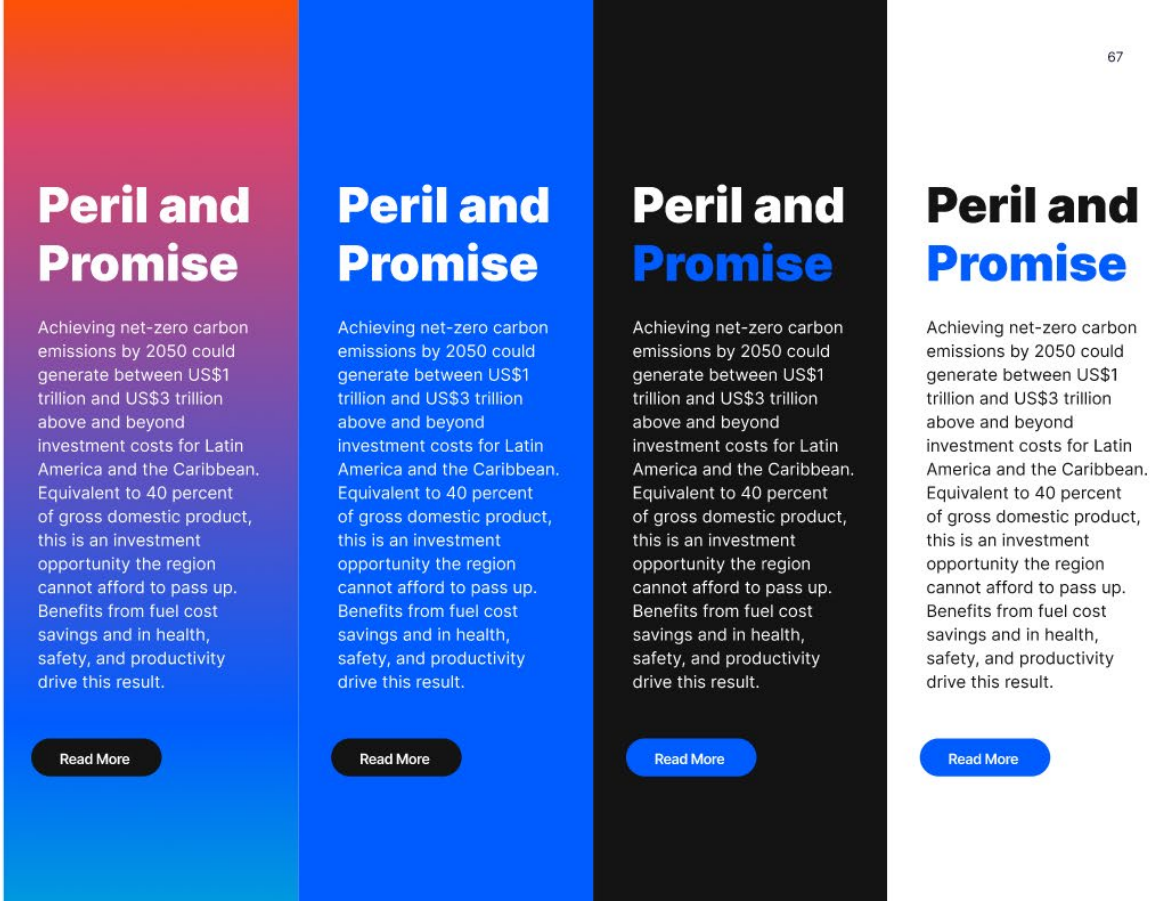

Use right-aligned text only and avoid full justification.

Reserve centered alignment exclusively for short callouts; never apply it to charts or graphs.

These are the permitted color combinations for type.

All pairings have been tested for accessibility and meet contrast requirements.

When secondary background colors are used, pair them with these approved typography and UI colors.

Peril and Promise

Achieving net-zero carbon emissions by 2050 could generate between US$1 trillion and US$3 trillion above and beyond investment costs for Latin America and the Caribbean.

Equivalent to 40 percent of gross domestic product, this is an investment opportunity the region cannot afford to pass up. Benefits from fuel cost savings and in health, safety, and productivity drive this result.

IDB Group Impact Framework Portfolio Results: Dataset

By Strategic Planning and Monitoring Division (SPD/SMO)

This dataset provides detailed data on the Portfolio Results indicators of the IDB Group Impact Framework 2024-2030.

The Impact Framework is the highest-level tool of the IDB, IDB Invest, and IDB Lab for monitoring performance and achieving strategic objectives under IDBStrategy. It serves important functions in both accountability and performance management, with indicators that capture our Mission Goals, Portfolio Results, and Performance Targets.

This dataset contains the 2024-2030 indicators and targets that guide the work of the IDB, IDB Invest, and IDB Lab to deliver tangible results for Latin America and the Caribbean.

Argentina	478,530	478,530	478,530	2,795

REGULATIONS OF THE BOARD OF GOVERNORS
OF THE INTER-AMERICAN DEVELOPMENT BANK

SECTION 1. MEETINGS

(a) The Board of Governors shall hold a regular meeting in a regional member country annually at such date and place as the Board of Governors itself may determine. However, the Executive Directors may change the date and place of the meeting when there are circumstances or reasons justifying such action.

(b) The Board of Governors may, in addition, hold special meetings when it so decides or when called by the Board of Executive Directors pursuant to Article VIII, Section 2(d), of the Agreement Establishing the Inter- American Development Bank (hereafter referred to as the Agreement.)

(c) The President of the Bank shall notify all the members of the Bank, by the most rapid possible means, of the date and place of each meeting of the Board of Governors. Such notification must be dispatched at least 30 days prior to the date of a regular meeting and 15 days prior to the date of a special meeting. In case of emergency, notification by telegram or cable 10 days prior to the date set for a meeting shall be sufficient.

(d) A quorum for any meeting of the Board of Governors shall be an absolute majority of the total number of Governors, including an absolute majority of the Governors of regional members, representing not less than three- fourths of the total voting power of the member countries.

(e) Any meeting of the Board of Governors at which there is no quorum may be postponed from day to day for a maximum of three days by decision of the majority of the Governors present.

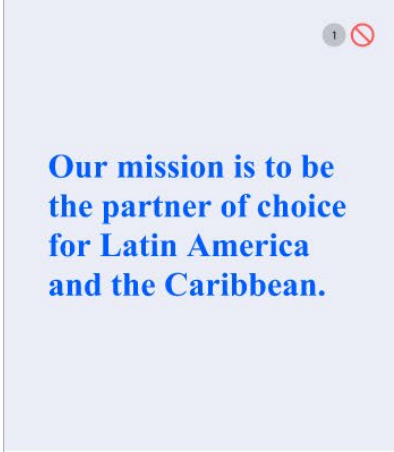

(f) The Board of Governors may order the temporary adjournment of any meeting and its resumption at a later date.

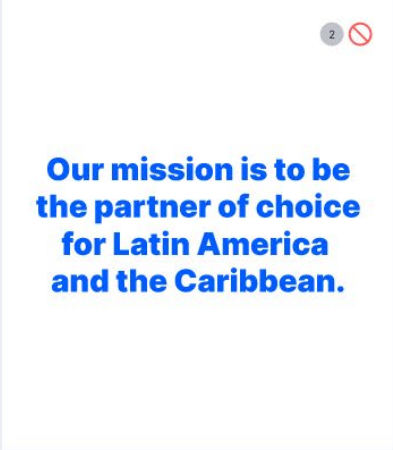

Typography
Don'ts

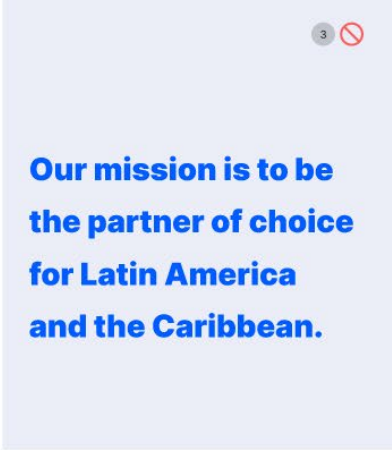

The examples on this page show some typical cases of misuse of the Typography.

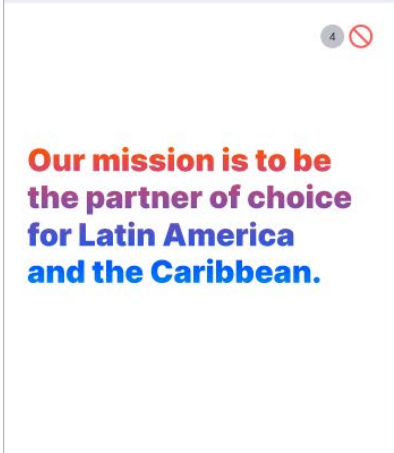

Do not:

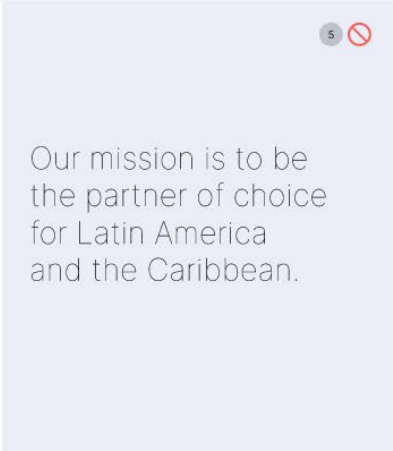

1. Use Times New Roman for communications.
2. Center-align headlines.
3. Deviate from the specified leading.
4. Apply gradients to text.
5. Use not allowed type weights.
6. Use negative kerning

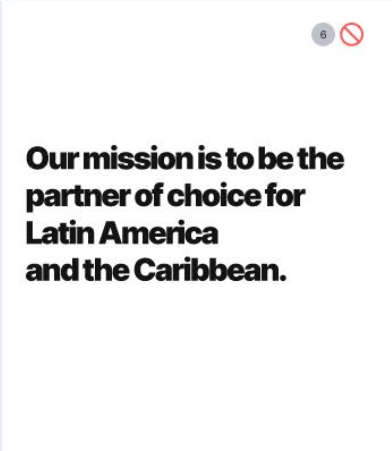

Some internal platforms and software used across the IDB Group have system-defined default fonts that cannot be modified or where font substitutions may cause rendering, compatibility, accessibility, or visualization issues. In these cases, the platform's default font may be used as an exception to the brand typography guidelines.

This exception applies only when technical limitations prevent the use of approved brand fonts. It does not apply to graphic design, publications, marketing materials, presentations, audiovisual products, websites, social media assets, or any other branded communications where approved typography can be implemented.

Art Direction

Good art direction turns a visual system into a consistent brand experience. It also safeguards quality and trust. Art direction sets standards for credibility.

Check List

Don’ts

Our photography is built on four pillars: People, Infrastructure, Environment and Business.

Every image should be captured through the lens of optimistic realism. This means clear, credible and natural images.

Everything must be credible. Plausible signage and authentic diversity. Avoid clichés, heavy filters and cluttered scenes.

THEMES
What to represent

STYLE PRINCIPLES
How it should look

People
Infrastructure
Environment
Business

OPTIMISTIC REALISM

Clear
Credible
Natural
Controlled Backgrounds
Minimal Visual Noise
Intentional framing

Art Direction
People

Our people pillar highlights real individuals across LAC.

Entrepreneurs, engineers, educators, health workers, farmers and families, children, elderly, indigenous and people with disabilities.

Representation must be inclusive and credible, with a cool-neutral grade and no color tints or heavy filters.

Art Direction
People
Image Selection Criteria

The criteria below will serve as a reminder of what to look for when choosing the perfect image:

Community
Inclusion
Closeness / human warmth
Hands-on tasks
Subtle expressiveness
Documentary
Culture and belonging
No rigid poses or clichés

Art Direction
Infrastructure

Show the systems that move people and progress: bridges and roads, transit hubs, energy and water assets, ports, grid and telecom.

Favor wide shots with leading lines and clean horizons; use soft, available light and a cool-neutral color.

Art Direction
Infrastructure
Image Selection Criteria

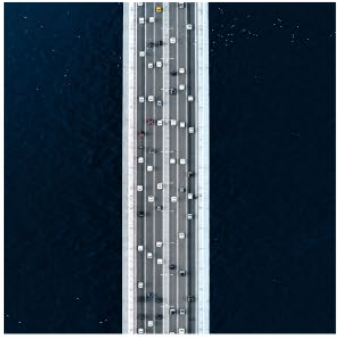

The criteria below will serve as a reminder of what to look for when choosing the perfect image:

Aerial infrastructure shots
Monumental
Geometric / linear
Rhythmic repetition
Minimal / clean
Order / structure
Low saturation

Art Direction
Environment

This pillar shows the natural systems we help protect and restore.

Art Direction
Environment
Image Selection Criteria

The criteria below will serve as a reminder of what to look for when choosing the perfect image:

Macro details
Organic textures
Iconic fauna
LAC context

Art Direction
Business

This pillar tells the story of enterprise in motion. How ideas become products, services, and jobs. Images that make the viewers feel progress.

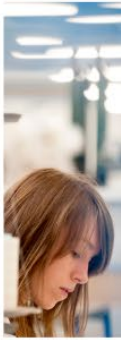

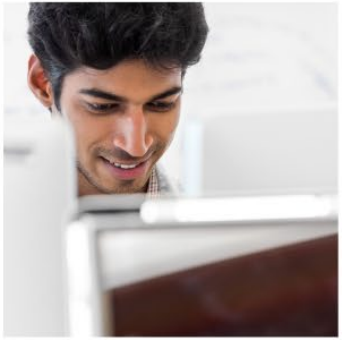

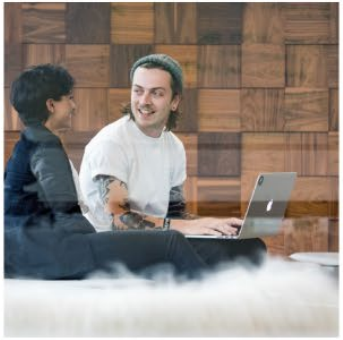

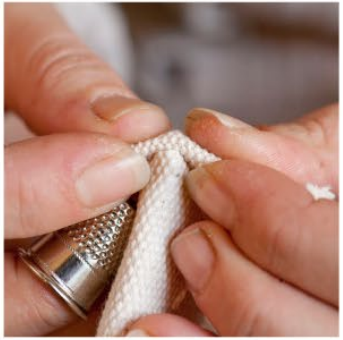

Art Direction
Business
Image Selection Criteria

The criteria below will serve as a reminder of what to look for when choosing the perfect image:

Real economic activity
People at work
Macro details
Small business
Startup team

Art Direction
Style Principles

Clear. Generous breathing room for headlines and messages, with a clear hierarchy between subject and background.

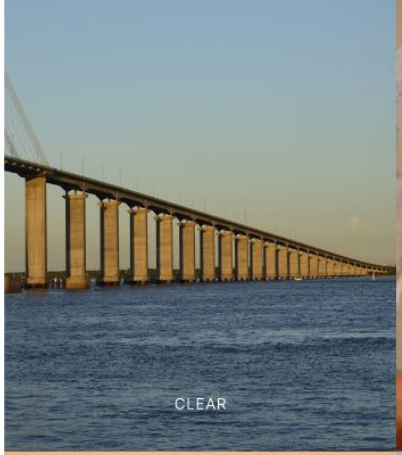

Credible. Everything should portray the real life. No fake props or out-of-place “futuristic tech” aesthetics.

Natural. Natural light and authentic expressions. Avoid forced poses. Show natural gestures and people.

Controlled Backgrounds. Use backgrounds that don’t compete with the subject or copy.

Minimal Visual Noise. Less is more. Avoid clutter, busy textures and signage overload.

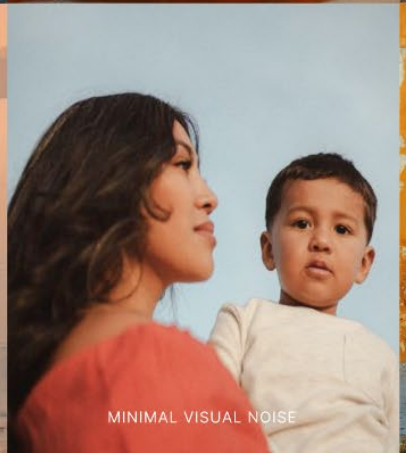

Intentional Framing. Use framing that leads the eye.

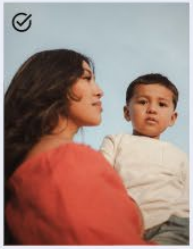

Use this quick check list before approving any photo.

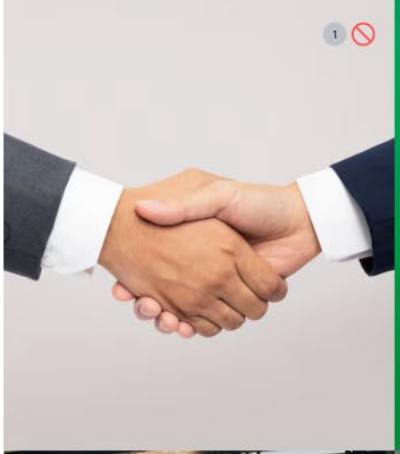

THEME FIT	OPTIMISTIC REALISM	NATURAL POSE	CLARITY	COLOR & CONTRAST
Does the image represent one of these? People, infrastructure, environment or business	Does the image reflect a real action? Is there natural light?	Do the people in the image have relaxed gestures?	Does the image have clean background, minimal visual noise and usable copy space for headlines/CTAs?	Does the image have a neutral look, not too bright colors and controlled tones?
				

Art Direction
Don'ts

The examples on this page show some typical cases of misuse of art direction.

Do not:

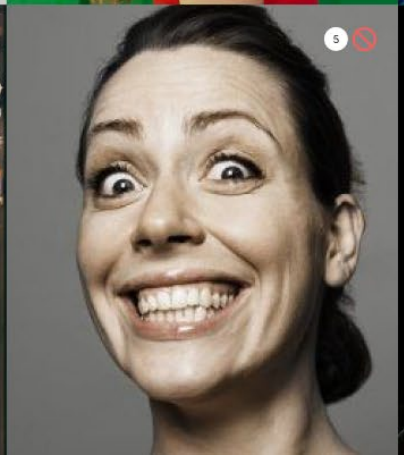

1. Use cliché images.
2. Use images with vivid color.
3. Use tinted images.
4. Use cluttered images.
5. Select people with exaggerated gestures.
6. Use futuristic images.

Iconography

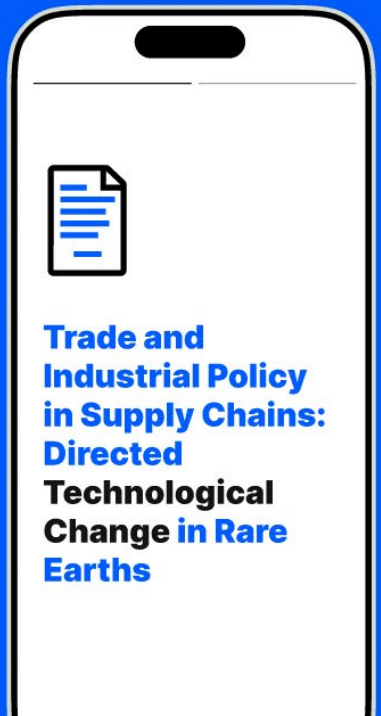

Icons are the system’s fastest language. They condense complex actions and ideas into simple, familiar shapes that users recognize at a glance.

Iconography

Using Iconography
Style DNA
Grid
Margin
Colorways
Stroke Variation
Breaking Point
Library Examples
In Use Examples
Don’ts

Our icon system is built with two strokes and two colors.

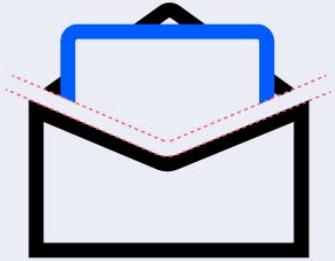

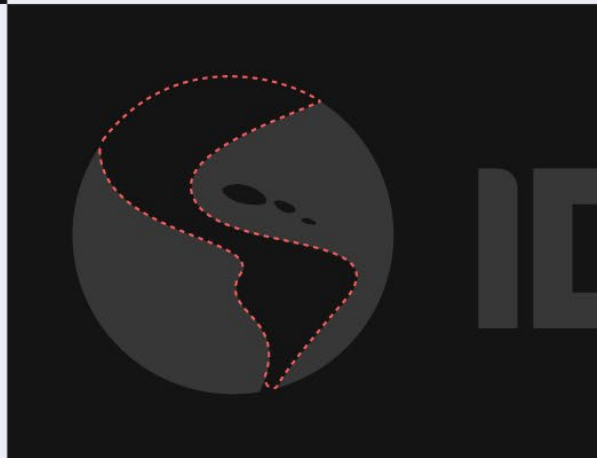

Our icon system inherits the wordmark's geometry. Its angles and curves.

Each icon is constructed from two elements, with intentional negative space that echoes the symbol's open core.

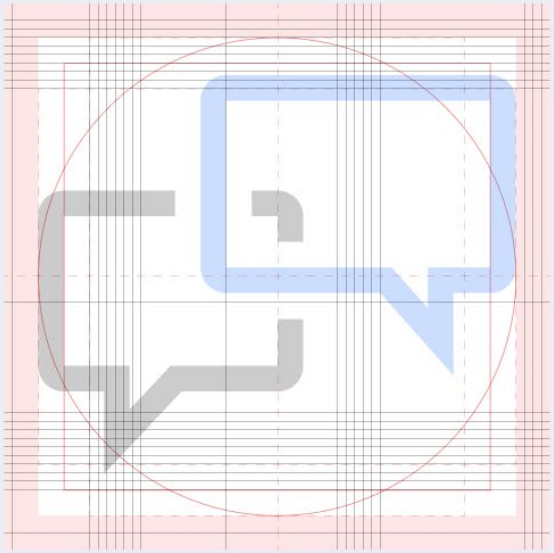

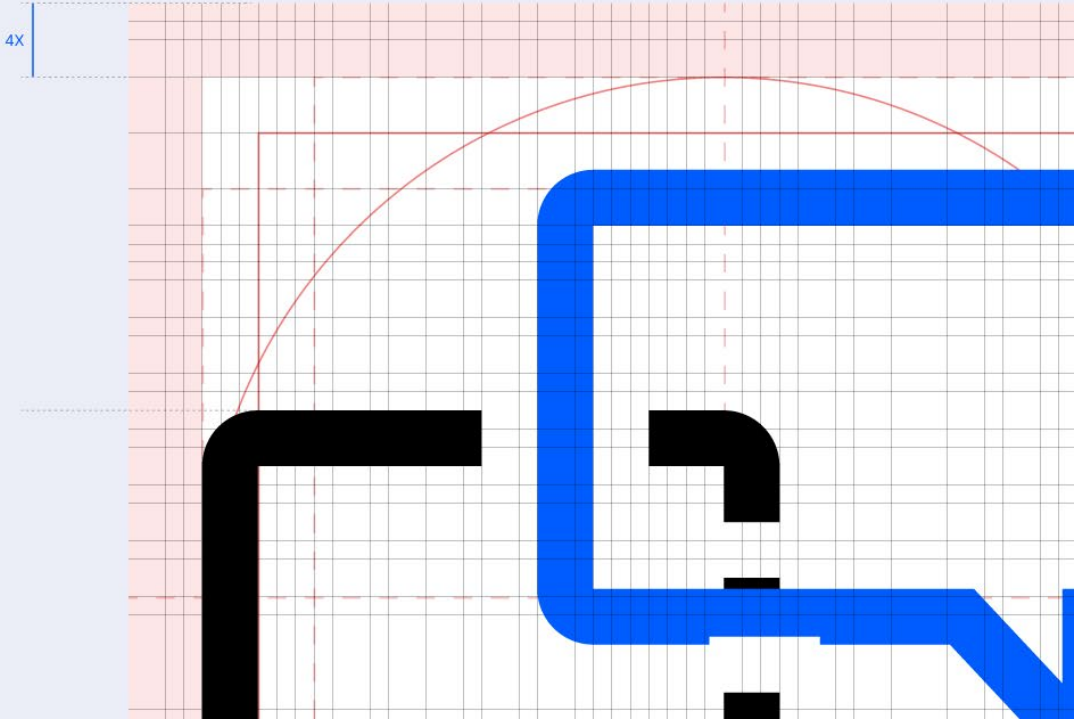

We design every icon on a 64×64 pixel grid to keep proportions consistent.

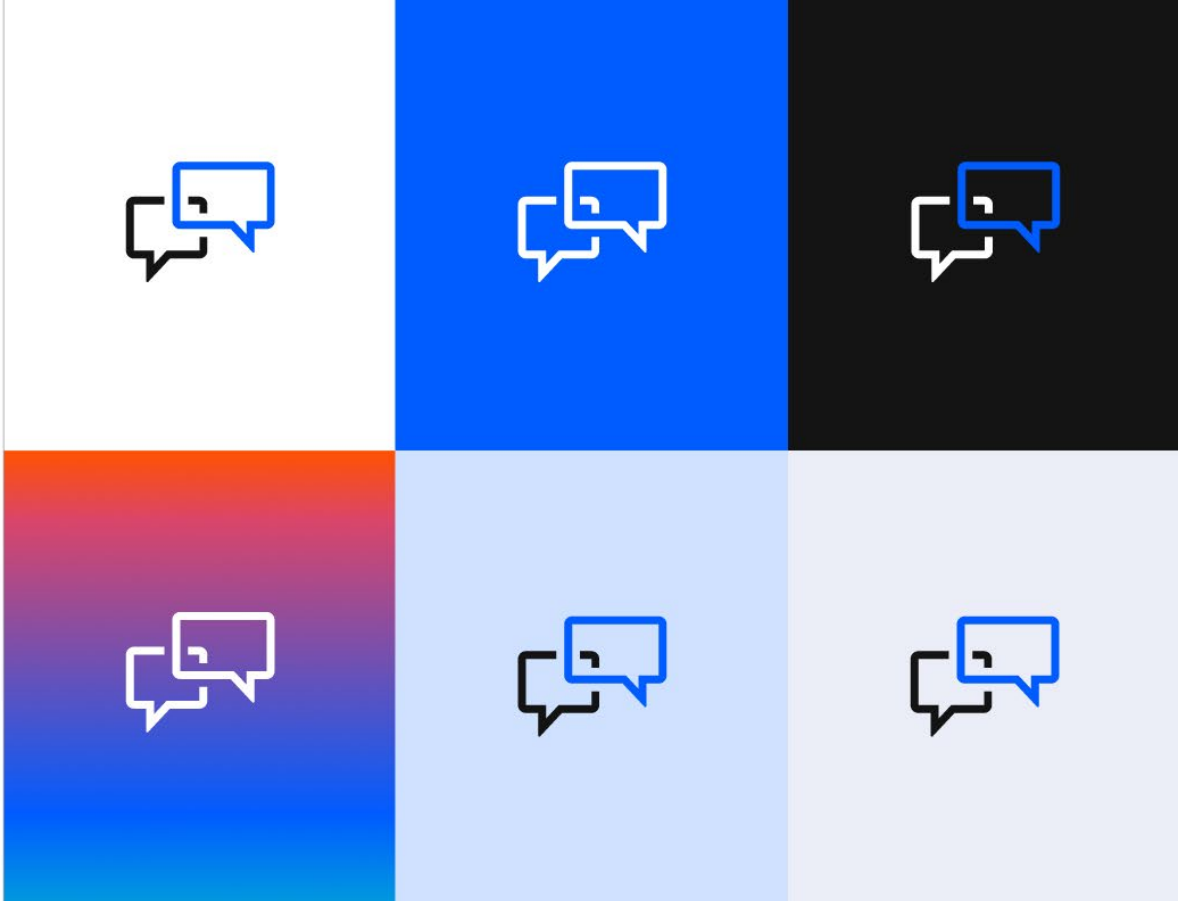

All icons are built on a 64×64 grid with a fixed 4 px clear space on every side. No strokes may enter this margin.

Iconography
Colorways

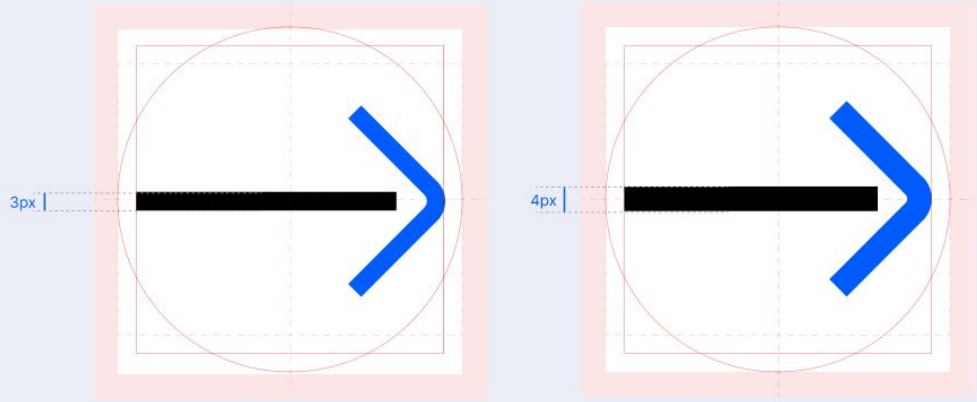

These are the approved color combinations for icons.

Iconography
Stroke Variation

Use the 3px stroke for communication icons at larger sizes where detail and presence matter. 80px, 64px and 48px.

Use the 4 px stroke for functional UI icons at smaller sizes to keep shapes crisp and readable. 32px 24px 16px.

Strokes scale as shown, do not interpolate other weights.

Use a 4px stroke for any icon under 48px to maintain clarity.

STROKE 3PX

80X80 64X64 48X48

Communication

STROKE 4PX

32X32 24X24 16X16

Functional IU

ECONNET

Trade and industrial policy in supply chains: directed technological change in rare earths

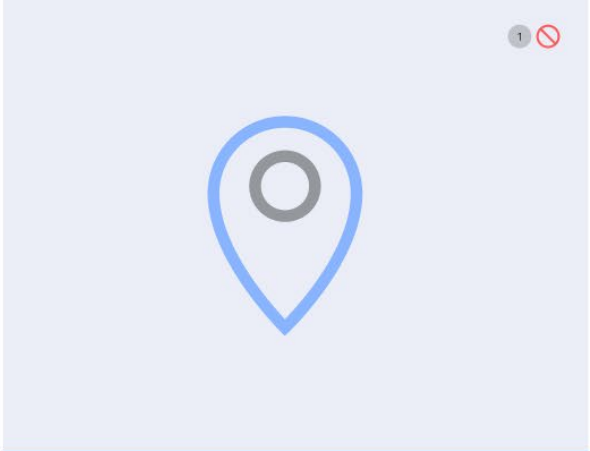

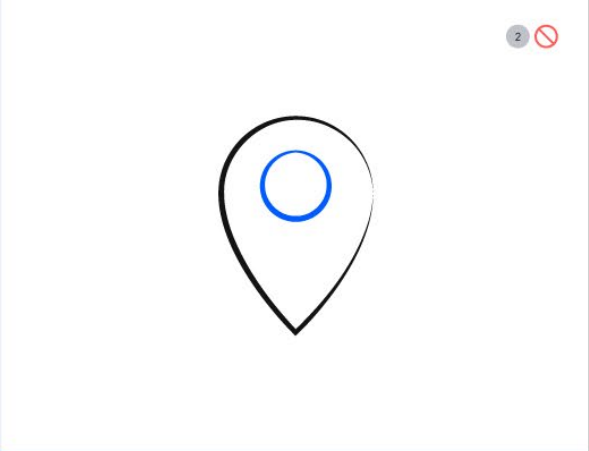

Iconography
Don'ts

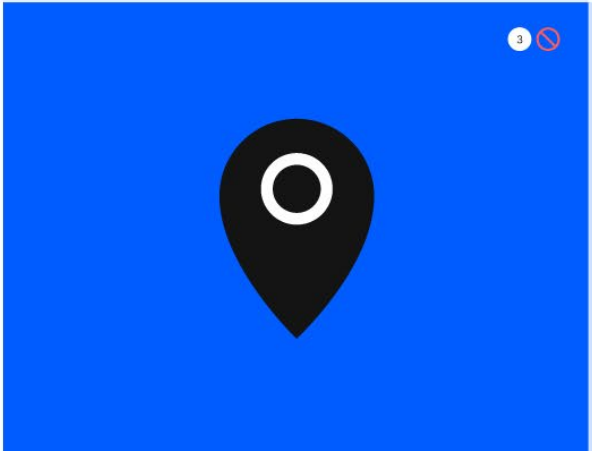

The examples on this page show some typical cases of misuse of the iconography system.

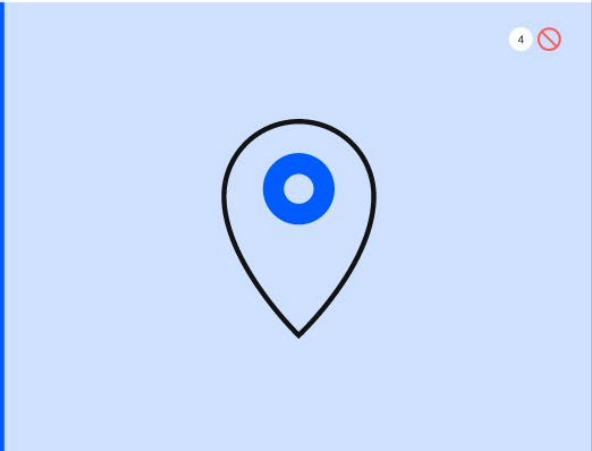

Do not:

1. Apply non-approved colors to icons.
2. Apply brush effects.
3. Use filled containers.
4. Change line thickness.

Photography is the preferred visual medium for IDB Group communications.

Whenever possible, teams should prioritize the use of IDB Group-owned photography. When suitable imagery is not available, stock photography may be used as a secondary option.

Illustrations may be used in specific cases where photography is not the most effective solution, particularly for abstract concepts, complex topics, future-oriented themes, data-driven narratives, or internal communications materials.

To ensure visual consistency across the organization, the recommended illustration style is based on the work of Getty Images artist **Nadezhda Fedrunova**. Illustrations should follow a clean, modern, and approachable aesthetic and be adapted to the IDB Group color palette.

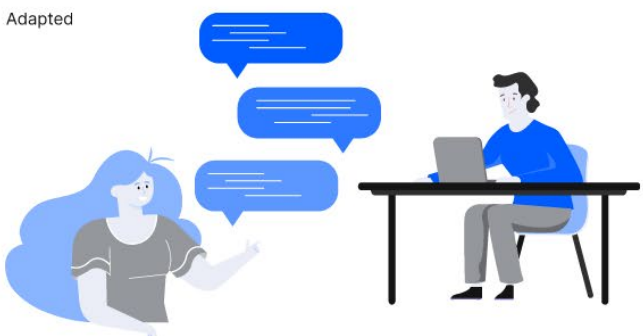

Illustrations should complement the IDB Group visual identity and be used selectively to support communication objectives rather than replace photography as the primary visual language.

Using IDB Group Gradient
Using Images
Inset Images with Margin

Step by Step

Don’ts

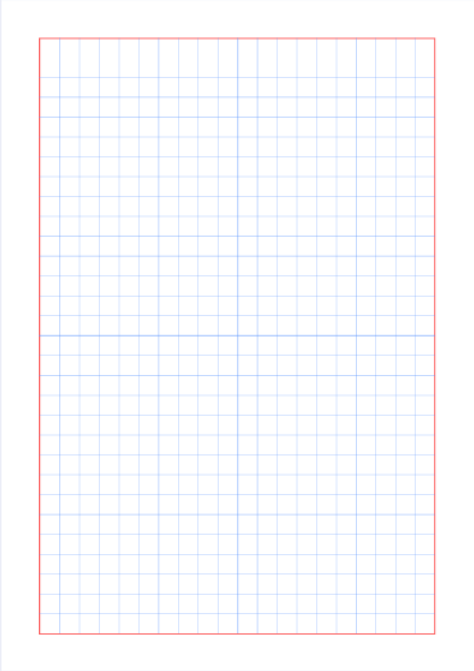

Our layout system is simple to use and highly adaptable. With the same grid and spacing we can “dial” expression up or down, adjusting type scale, color intensity and image presence to suit each brand need.

It can be dial from an informational function to a expressive one, when the aim of the communication requires.

- EXPRESSIVE ⟵ ⟶ + EXPRESSIVE

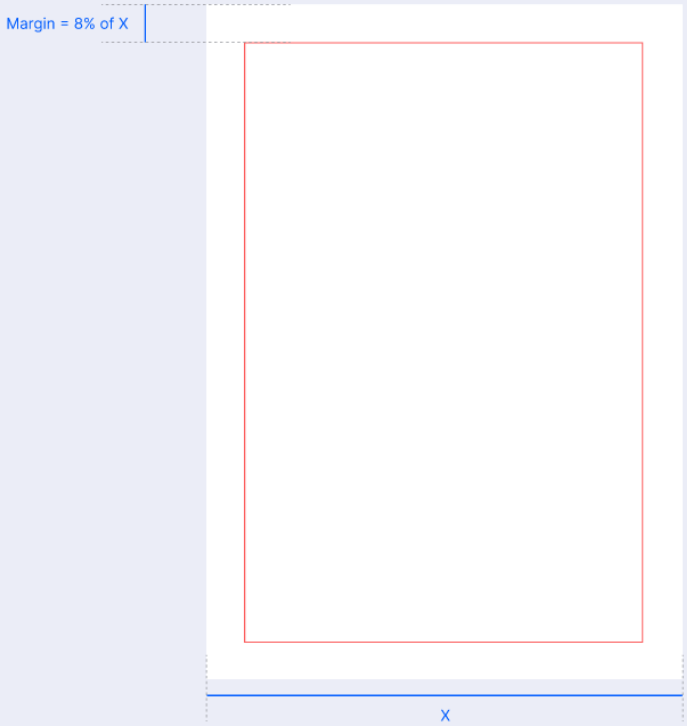

This is our grid. The following pages show how it is constructed across different formats.

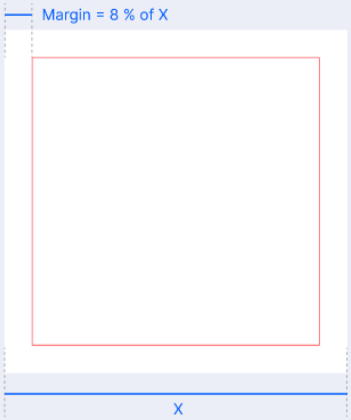

Layout System
Grid Construction
Margin

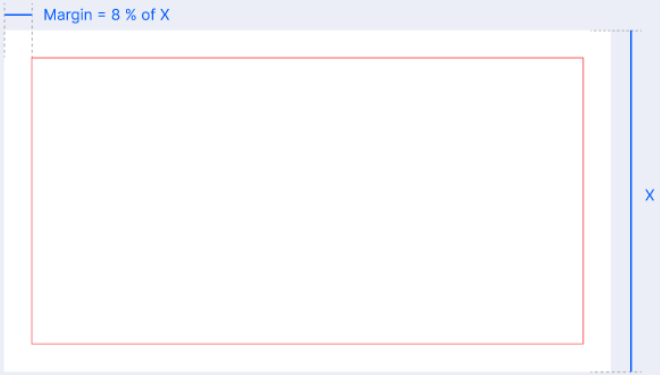

Set margins to 8% of the layout's shortest side across all formats.

Apply this rule consistently for print and digital to maintain clear spacing and visual balance.

Examples of the margin calculation in different formats.

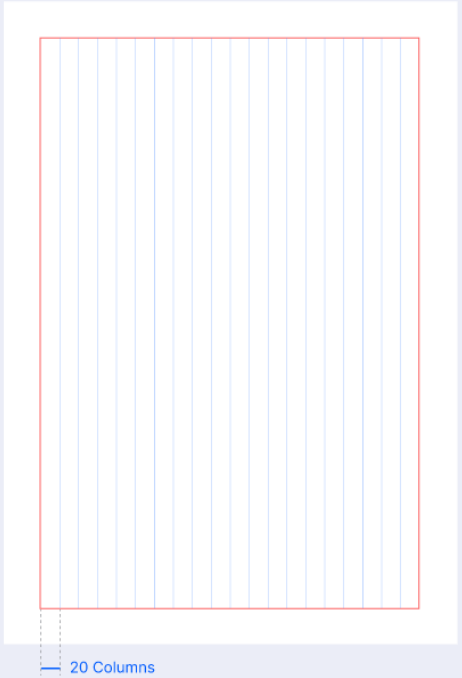

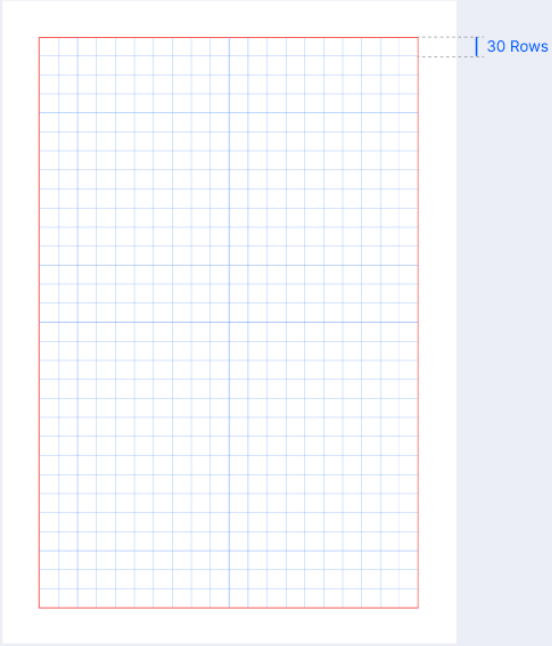

Layout System
Grid Construction
Modules

Use a modular grid of 20 columns by 30 rows for all DIN sizes. As a general rule always divide the shortest side by 20.

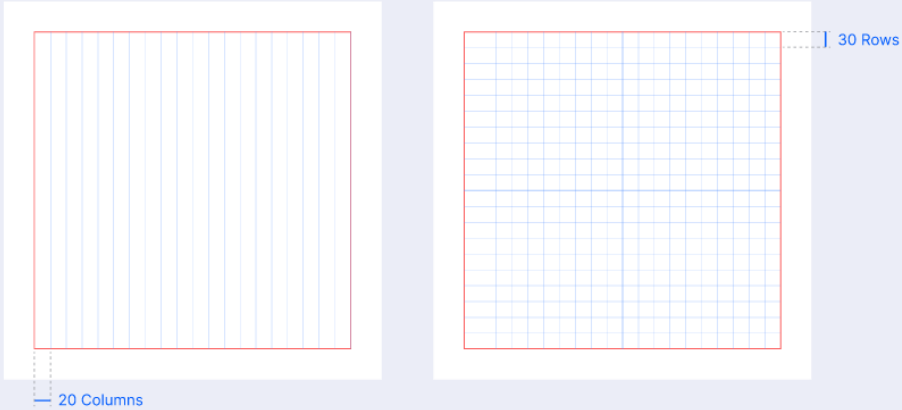

Apply this grid to align type, imagery and components consistently across layouts.

DIN FORMAT

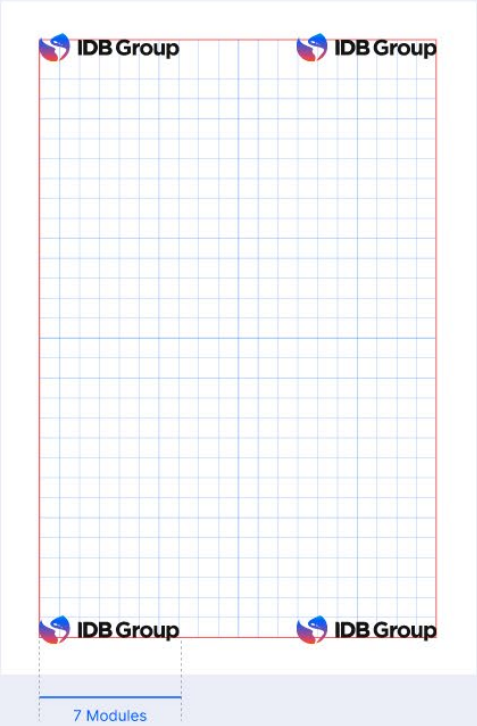

Maintain the same grid principle in square layouts: 20 columns × 30 rows.

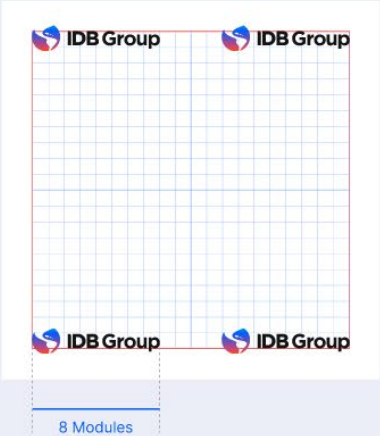

Use a 30 column × 20 row grid for all landscape formats.

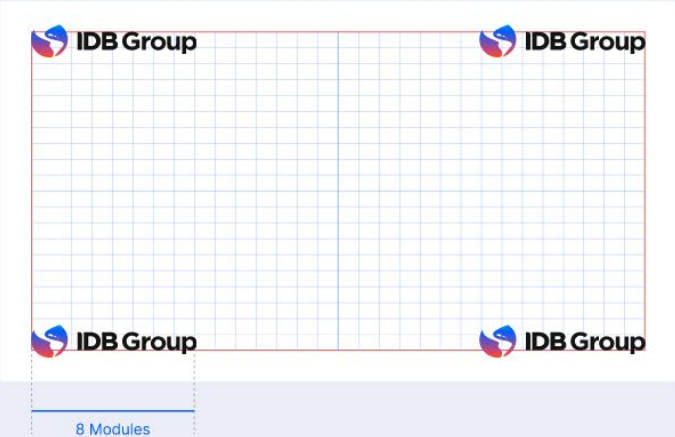

As a general rule, set the logo to a width of 7 grid modules in all DIN formats. It may be placed in any of the four corners, selecting the position that best balances the layout and surrounding elements.

As a general rule, set the logo to 8 modules horizontally in all 1:1 formats. Placement is limited to the four corners, aligned to the grid and respecting clear space.

As a general rule, set the logo to a width of 8 modules in all landscape formats. It may be placed in any corner.

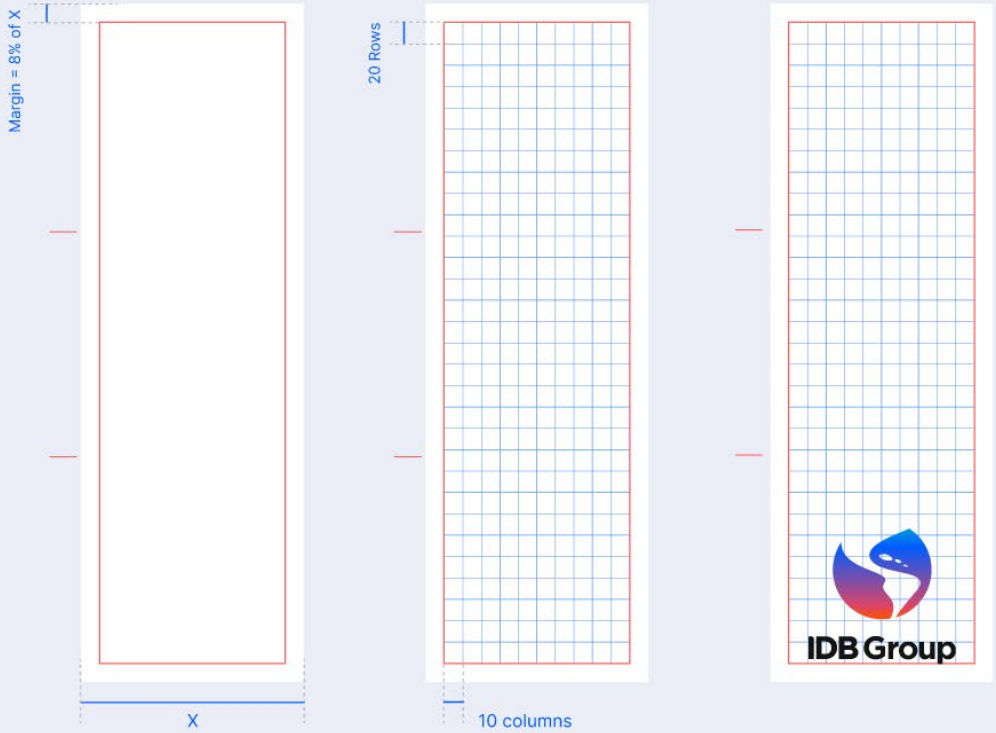

Layout System
Secondary Lockup Size and Proportions

Use the secondary logo only in extremely vertical formats with a minimum aspect ratio of 1:3. Do not apply it in standard, landscape or square layouts.

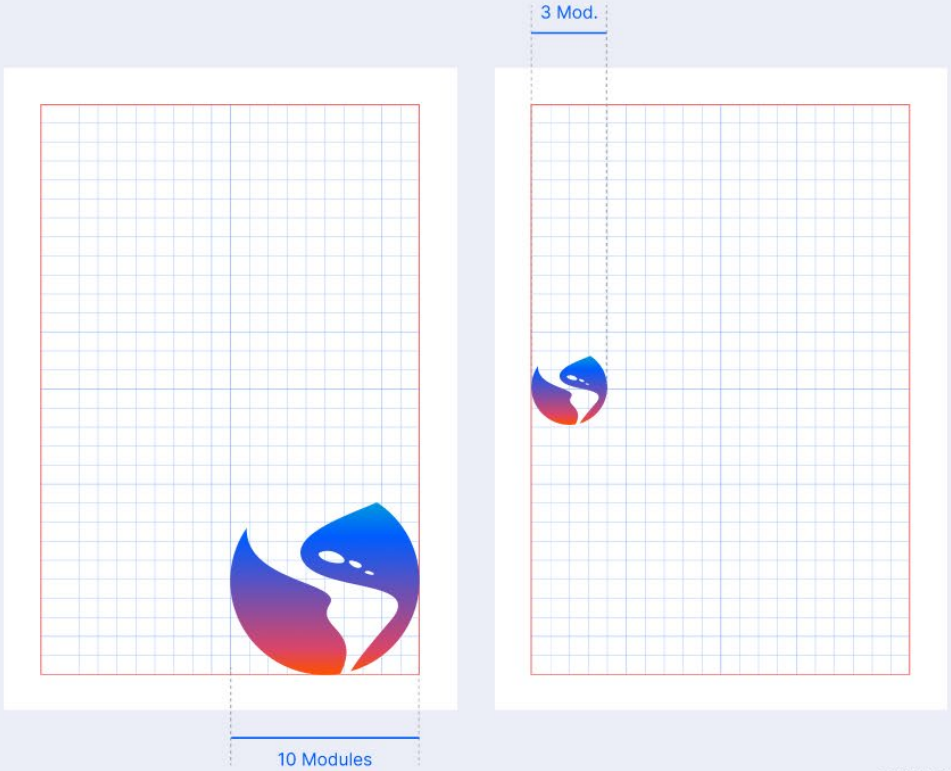

As a general rule set the secondary logo to 8 modules in width and place it at the bottom of the composition, aligned to the grid.

Exception: lectern applications follow their dedicated location.

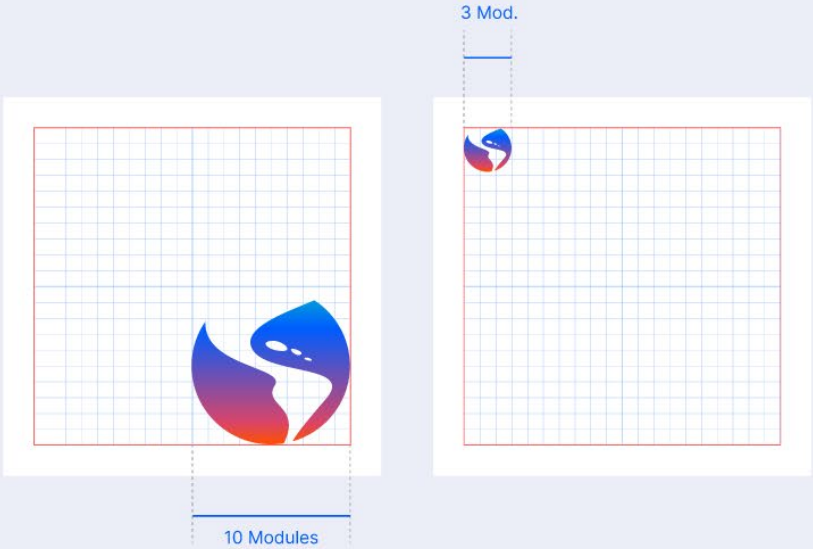

Use the standalone symbol in two standard sizes only. Large at 10 grid modules wide and Small at 3 grid modules wide.

The symbol may be placed anywhere within the layout grid.

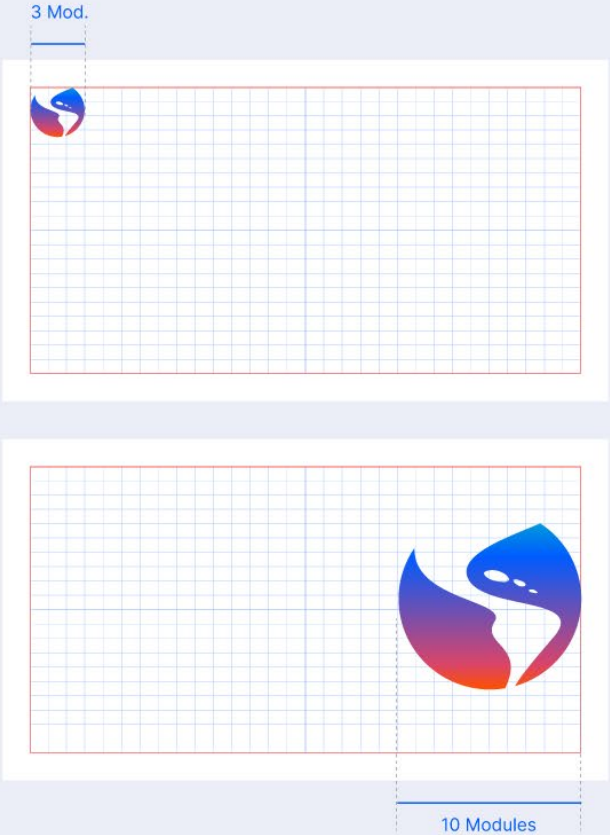

Use the standalone symbol in two standard sizes only. Large at 10 grid modules wide and Small at 3 grid modules wide.

The symbol may be placed anywhere within the layout grid.

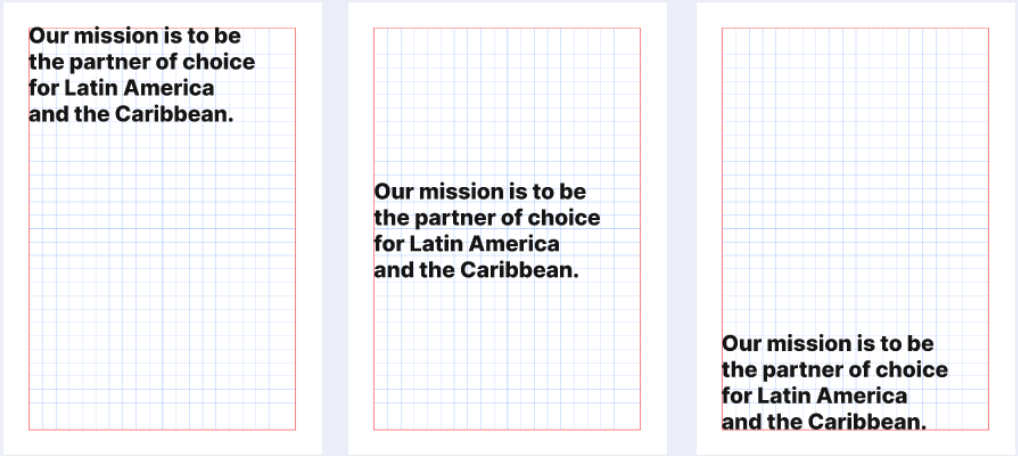

Use the standalone symbol in two standard sizes only. Large at 10 grid modules wide and Small at 3 grid modules wide.

The symbol may be placed anywhere within the layout grid.

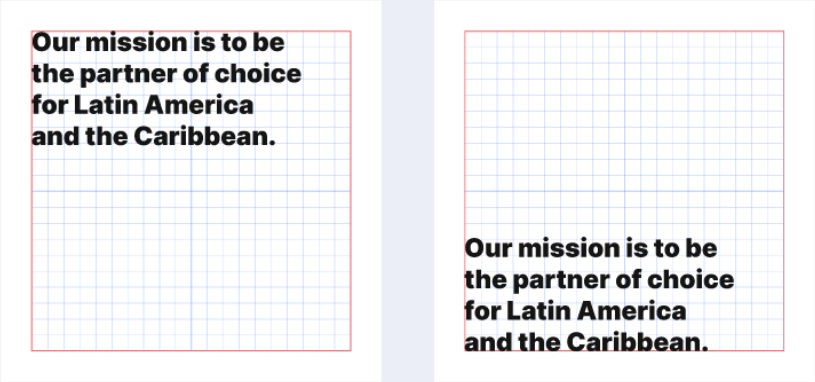

In DIN formats place text blocks at one of three vertical positions only: top, center or bottom.

Use a single position per layout, align to the grid and margins and avoid intermediate placements.

In 1:1 formats place text blocks at one of two vertical positions only: top or bottom.

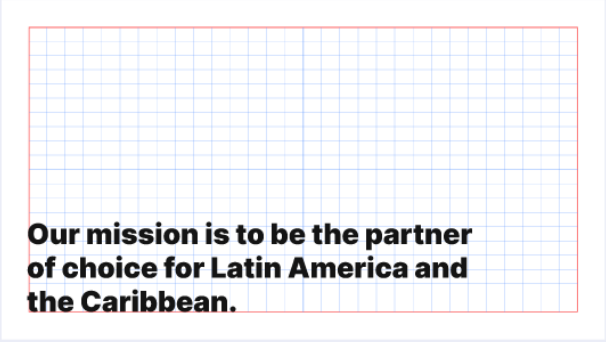

Use a single position per layout, align to the grid and margins and avoid intermediate placements.

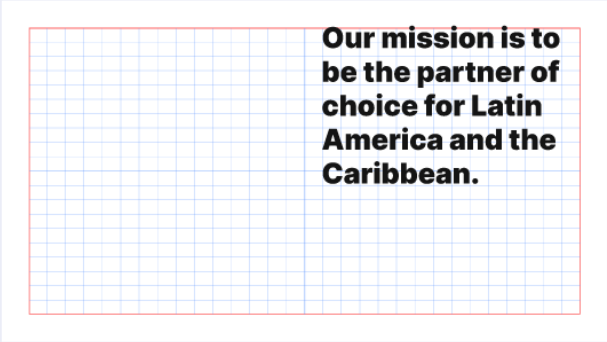

In landscape formats place text blocks at one of two vertical positions: top or bottom.

Use a single position per layout, align to the grid and margins and avoid intermediate placements.

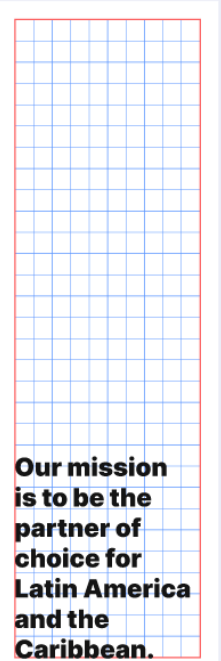

In landscape formats text can be also placed vertically as these images shown.

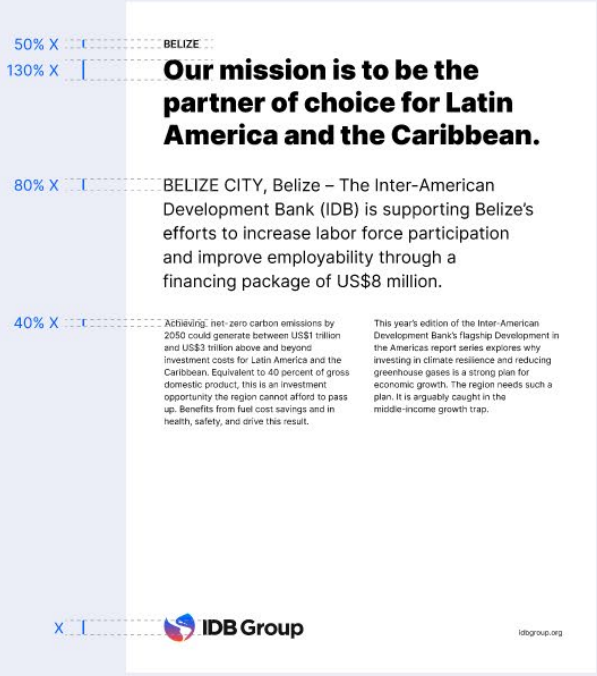

In extreme vertical formats, place text blocks at one of two vertical positions: top or bottom.

These are the recommended sizes for the typographic hierarchy.

The wordmark height serves as the base unit; all headings, subheadings, body, and caption sizes are calculated proportionally from this reference to ensure consistent scale and visual balance across formats.

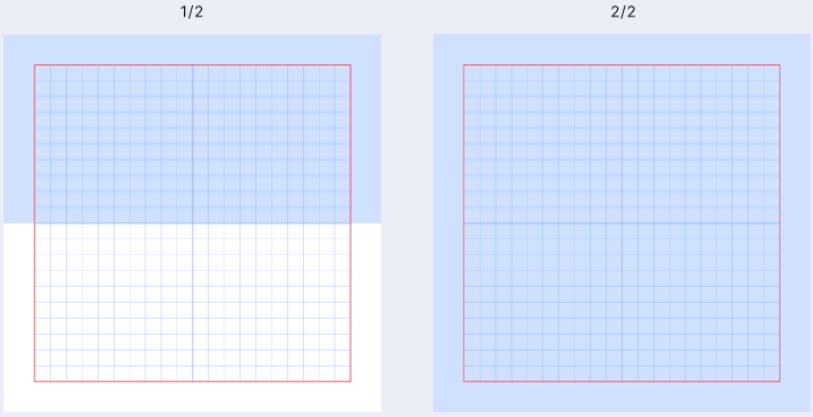

Use the following DIN format divisions as the standard grid.

These zones define where to apply color, gradient, imagery and how to distribute typography, icons and CTAs across the page.

Use the following 1:1 format divisions as the standard grid.

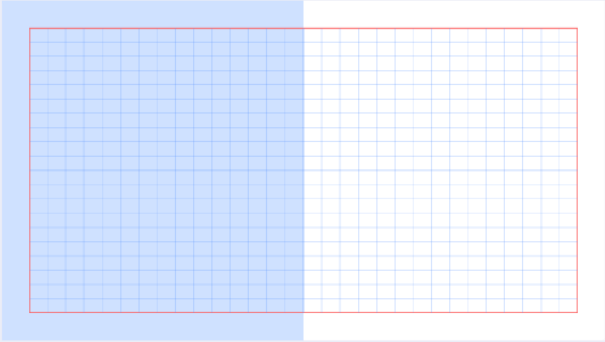

These zones define where to apply color, gradient, imagery and how to distribute typography, icons and CTAs across the page.

Inset Images with Margin

When using an inset image with margin within the layout, use only the approved positions shown and do not exceed the specified maximum sizes.

Layout System
Area Division
Inset Images with Margin

When using an inset image with margin within the layout, use rounded corners.

For reference use a 6px corner radius.

This is an example of inset images with margin in layout.

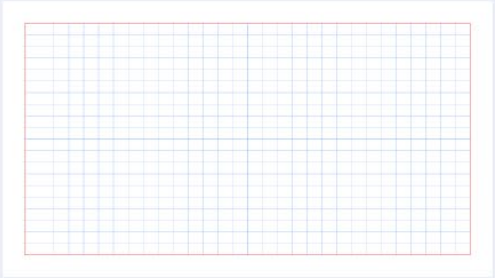

Here is a step-by-step process to create any communication material for our brand.

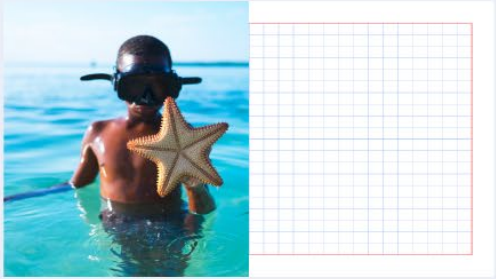

1. Define format, grid and margin.
2. Add photography.
3. Add logo.
4. Add typography.

It is important for a consistent use of the visual elements to take into consideration all the rules and recommendations explained within this guide.

4

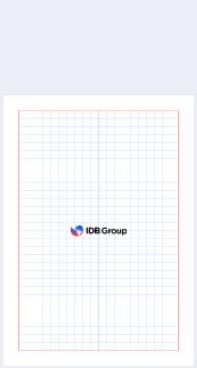

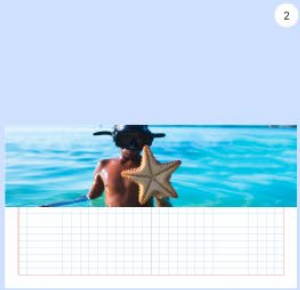

Color
Don'ts

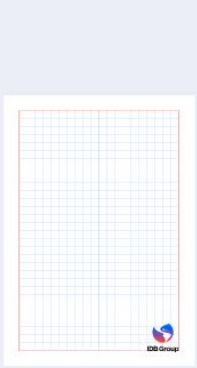

The examples on this page show some typical cases of misuse of the layout

Do not

1. Center the logo in communication layouts.
2. Create unapproved grid divisions.
3. Use the secondary logo outside extreme vertical formats.
4. Use photography in extreme vertical layouts.
5. Apply vertical splits in 1:1 formats.
6. Use inset images without margin.

Additional Information

Since it is necessary to provide a number of different brand logo variations for a wide range of uses, a naming system has been developed to aid identification.

All master artwork files are supplied in EPS, PDF, PNG, SVG and Adobe Illustrator® master files.

If you are supplying or using the logo for any professional media, always supply vector file formats (ai, svg). Other file formats are likely to be at incorrect resolution, size and/or color version for their intended use.
